Specification for HTPA82x62L21.6/1.0A

Rev.0: 2015.01.21 Fg

The HTPA82x62L_/_M(UDP) is a fully calibrated, low cost thermopile array module, with fully digital UDP interface. The module delivers an electrical offset and ambient temperature compensated output stream, which can be already used for image processing, pattern recognition and presence detection purposes. Object temperatures can be easily obtained by this data stream.

Answer:	"HTPA series responsed! I am Arraytype **[AT]**" Firmware version, date and author information. "I am running on **[MCLK]** kHz" "Amplification is **[AMP]**\r\n" "MAC-ID: **[MACID]** IP: **[IP]**\r\n" A second packet with calibration depending information is send.

Message2:	"x Release HTPA series device" (only Ethernet device)
Result:	Device disables hardware IP filter. All packets except ARP's, DHCP requests, Broadcasts, Message1, Message3 and Message4 are discarded.
Answer:	"HW-Filter released\r\n"

Message3:	"HTPA device IP change request to **[IP]**.**[MSK]**." (only Ethernet device)
Result:	The device changes the IP and the subnet mask to the given value and writes it to EEPROM. The IP becomes the default IP, therefore the device will use it at the next reset, if no DHCP is found.
Answer:	"Device changed IP to **[IP]**. and Subnet to **[MSK]**.\r\n"

Message4:	"Bind HTPA series device" (only Ethernet device)
Result:	Device enables hardware IP filter. Only packets from sender IP, ARP's, DHCP requests and Broadcasts are accepted. Device accepts now the control characters listed in **Table 1.**
Answer:	"HW Filter is **[IP]** MAC **[MACID]**\n\r"" Insert in the above string the IP and MAC-ID of the Sender from Message4.

Control Messages [continued]:

Message5:	"Set EEPROM data"
Conditions:	Only possible if Message 4 already successful sent. **ATTENTION!** Calibration data is overwritten!!!
Result:	Writes the next received packets into EEPROM, if packet size is equal to 1024 bytes. Device writes to EEPROM, until EEPROM is completely filled. EEPROM size depends on Device type: HTPA8x8, HTPA16x16 and HTPA32x31: 16384 byte; HTPA64x62: 65536 byte. HTPA82x62: 143360 byte.
Answer:	"Write was successful.\n\r"

Message6:	"Set DeviceID to **[DEVID]**"
Result:	The given Device ID **[DEVID]** is written to EEPROM. This ID is shown on receive of ‘M’. The Device ID can be used for customer specific purposes.
Answer:	"DeviceID changed to **[DEVID]**\r\n"
