

## 1 Principal Schematic for HTPA8x8d:

Prelim

## 2 Pin Assignment– Bottom View:

Figure 1: pin-allocation

| Pin | Symbol | Description  |
|-----|--------|--|
| 1   | SDA    | Digital I/O, Open Drain, 100k PU, Serial Data                |
| 2   | SCL    | Digital I/O, Open Drain, 100k PU, Serial Clock               |
| 3   | VDD    | Positive supply voltage                                      |
| 4   | VSS    | Negative supply voltage / Ground (0V) (connected to housing) |

## 3 Optical Orientation:

## 5 Characteristics:

### 5.1 Common Specifications:

|                             |   |
|-----------------------------|---|
| Technology                  | n-poly/p-poly Si                          |
| Element Resistance          | approx. 300 kOhms                         |
| Sensitivity                 | approx. 450 V/W without optics and filter |
| Thermal pixel time constant | <4 ms                                     |
| Digital Interface           | I <sup>2</sup> C                          |
| Analog Output               | No  |
| selectable Clock            | 1 to 13 MHz                               |
| EEPROM size                 | 256x16 Bit                                |

|  |       |
|--|-------|
| Pitch  | 90 µm |
| Absorber size  | 44 µm |
| Max. Framerate   | 88 Hz |
| (maximum I <sup>2</sup> C and sensor clock speed with full ADC-resolution) |       |
| 64 sensitive elements  |       |

### 5.2 Optical characteristics:

|                |   |
|----------------|---|
| Focal length:  | 7.0 mm ("L" equals the focal length of the lens)  |
| F-Number:      | 1.2   |
| Field of view: | 6 x 6 deg   |
| Lens coating:  | AR-Coating; average reflectance per surface<br>< 3% for 8µm < λ < 11.5 µm<br>Environment acc. for MIL-C-48497 |

# HTPA8x8dR1L7.0/1.2HiC[Si]

Thermopile Array With Lens Optics

Rev.5: 2017.07.11 Schnorr

## Electric Specifications:

### Absolute Maximum Ratings:

| Parameter                         | Symbol           | Condition | MIN. | TYP. | MAX.                 | Unit   |
|-----------------------------------|------------------|-----------|------|------|----------------------|--------|
| Supply Voltage                    | V <sub>DD</sub>  |           | -0.3 |      | 3.6                  | V      |
| Voltage at All inputs and outputs | V <sub>IO</sub>  |           | -0.3 |      | V <sub>DD</sub> +0.3 | V      |
| Storage Temperature               | T <sub>STG</sub> |           | -40  |      | 85                   | Deg. C |

### Operating Conditions:

| Parameter             | Symbol           | Condition        | MIN. | TYP. | MAX. | Unit   |
|-----------------------|------------------|------------------|------|------|------|--------|
| Supply Voltage        | V <sub>DD</sub>  |                  | 3.3  | 3.35 | 3.6  | V      |
| Supply Current        | I <sub>DD</sub>  |                  |      | 1.7  | 4.5  | mA     |
| Standby Current       | I <sub>SBY</sub> |                  |      |      | 10   | μA     |
| Operation Temperature | T <sub>A</sub>   |                  | -20  |      | 85   | Deg. C |
| ESD-Protection        |                  | Human body model | 1.5  |      |      | kV     |
|                       |                  | 100pF + 1k50hm   |      |      |      |        |

### Electrical Characteristics

| Parameter                         | Symbol            | Condition | MIN.                | TYP. | MAX.                | Unit   |
|-----------------------------------|-------------------|-----------|---------------------|------|---------------------|--------|

## Preamplifier / ADC

| Parameter          | Symbol                    | Condition | MIN. | TYP. | MAX. | Unit                 |
|--------------------|---------------------------|-----------|------|------|------|----------------------|
| Chopper frequency  | $F_{\text{CHP}}$          |           |      | 20   |      | kHz                  |
| Preamplifier Noise | $N_{\text{PA}}$           | at 20 kHz |      | 72   |      | nV/HZ <sup>1/2</sup> |
| Frame rate         | FR1                       |           | 7.5  | 37   | 88   | Hz                   |
| ADC pos. Reference | $V_{\text{REFP}}$         |           |      | 1.6  |      | V                    |
| ADC neg. Reference | $V_{\text{REFN}}$         |           |      | 0.9  |      | V                    |
| ADC resolution     | $\text{ADC}_{\text{LSB}}$ | at 16 Bit |      | 21   |      | $\mu\text{V}$        |

**6 I<sup>2</sup>C Timings HTPA8x8d:**

| Parameter                        | Symbol                | Condition | MIN. | TYP. | MAX. | Unit          |
|----------------------------------|-----------------------|-----------|------|------|------|---------------|
| I <sup>2</sup> C clock frequency | $F_{\text{CLK}}$      |           |      | 400  | 1000 | kHz           |
| low pulse duration               | $T_{\text{CLK,lo}}$   |           | 0.50 |      |      | $\mu\text{s}$ |
| high pulse duration              | $T_{\text{CLK,hi}}$   |           | 0.26 |      |      | $\mu\text{s}$ |
| data set up time                 | $T_{\text{SU,data}}$  |           | 0.05 |      |      | $\mu\text{s}$ |
| data hold time                   | $T_{\text{hd,data}}$  |           | 0.00 |      |      | $\mu\text{s}$ |
| start setup time                 | $T_{\text{SU,start}}$ |           | 0.26 |      |      | $\mu\text{s}$ |
| start hold time                  | $T_{\text{hd,start}}$ |           | 0.26 |      |      | $\mu\text{s}$ |
| stop setup time                  | $T_{\text{SU,stop}}$  |           | 0.26 |      |      | $\mu\text{s}$ |
| stop hold time                   | $T_{\text{hd,stop}}$  |           | 0.26 |      |      | $\mu\text{s}$ |
| time between STOP / START        | $T_{\text{buf}}$      |           | 0.50 |      |      | $\mu\text{s}$ |

## 7 I<sup>2</sup>C Communication:

The chip uses the 7-bit I<sup>2</sup>C address 0x1A for configuration and sensor data and the address 0x1B to access the internal EEPROM followed by 1-bit of read/write command. The address byte is followed by an 8-bit command.

### 7.1 Write Command:

In case of a write access to an internal register the command is followed by the data byte. The chip acknowledges each byte with a low active ACK bit.

### 7.2 Read Command:

To read data from the chip first the address and command must be sent. After the last ACK a new start-bit (repeated start) and the address with a set read-flag initiates the read sequence. There can be bytes read as many as required. The last byte must be denoted by a not-acknowledge. The shown example below can be used e.g. to get the status register.

### 7.3 Sensor Commands:

The sensor has several registers that can be written and read, they are listed below.

#### Configuration register (write only)

| Addr / CMD | 0x1A / 0x01 |   |   |   |       |     |       |        |
|------------|-------------|---|---|---|-------|-----|-------|--------|
| Config Reg | 7           | 6 | 5 | 4 | 3     | 2   | 1     | 0      |
| Name       | RFU         |   |   |   | START | RFU | BLIND | WAKEUP |
| Default    | 0           | 0 | 0 | 0 | 0     | 0   | 0     | 0      |

The WAKEUP bit is used to switch on / off the chip and must be set prior all other operations. After the START bit is set the chip starts a conversion of the array or blind elements and enters the idle state (not sleep!) when finished.

If the BLIND bit is set the electrical offsets are sampled instead of the active pixel.

RFU means reserved for future use and can be subject to change.

#### Status Register (read only)

| Addr / CMD | 0x1A / 0x02 |   |   |   |   |   |   |     |
|------------|-------------|---|---|---|---|---|---|-----|
| Status Reg | 7           | 6 | 5 | 4 | 3 | 2 | 1 | 0   |
| Name       | RFU         |   |   |   |   |   |   | EOC |
| Default    | 0           | 0 | 0 | 0 | 0 | 0 | 0 | 0   |

If the EOC flag is set a previous started conversion has been finished.

**Trim Register 1 (write only)**

|            |             |   |   |   |           |   |   |   |
|------------|-------------|---|---|---|-----------|---|---|---|
| Addr / CMD | 0x1A / 0x03 |   |   |   |           |   |   |   |
| Trim Reg 1 | 7           | 6 | 5 | 4 | 3         | 2 | 1 | 0 |
| Name       | RFU         |   |   |   | MBIT TRIM |   |   |   |
| Default    | 0           | 0 | 0 | 0 | 1         | 1 | 0 | 0 |

MBIT\_TRIM: m = 4 to 12  $\Rightarrow$  (m+4) bit as ADC resolution (Default: m=12)

**Trim Register 2 (write only)**

|            |             |   |   |   |               |   |   |   |
|------------|-------------|---|---|---|---------------|---|---|---|
| Addr / CMD | 0x1A / 0x04 |   |   |   |               |   |   |   |
| Trim Reg 2 | 7           | 6 | 5 | 4 | 3             | 2 | 1 | 0 |
| Name       | RFU         |   |   |   | BIAS TRIM TOP |   |   |   |
| Default    | 0           | 0 | 0 | 0 | 1             | 1 | 0 | 0 |

BIAS\_TRIM\_TOP: 0 to 31  $\Rightarrow$  1 $\mu$ A to 13 $\mu$ A (Default: 5 $\mu$ A)

This setting is used to adjust the bias current of the ADC. A faster clock frequency requires a higher bias current setting.

**Trim Register 3 (write only)**

|            |             |   |   |   |               |   |   |   |
|------------|-------------|---|---|---|---------------|---|---|---|
| Addr / CMD | 0x1A / 0x05 |   |   |   |               |   |   |   |
| Trim Reg 3 | 7           | 6 | 5 | 4 | 3             | 2 | 1 | 0 |
| Name       | RFU         |   |   |   | BIAS TRIM BOT |   |   |   |
| Default    | 0           | 0 | 0 | 0 | 1             | 1 | 0 | 0 |

BIAS\_TRIM\_BOT: 0 to 31  $\Rightarrow$  1 $\mu$ A to 13 $\mu$ A (Default: 5 $\mu$ A)

This setting is used to adjust the bias current of the ADC. A faster clock frequency requires a higher bias current setting.

**Trim Register 4 (write only)**

|            |             |   |   |   |          |   |   |   |
|------------|-------------|---|---|---|----------|---|---|---|
| Addr / CMD | 0x1A / 0x06 |   |   |   |          |   |   |   |
| Trim Reg 4 | 7           | 6 | 5 | 4 | 3        | 2 | 1 | 0 |
| Name       | RFU         |   |   |   | CLK TRIM |   |   |   |
| Default    | 0           | 0 | 0 | 1 | 0        | 1 | 0 | 1 |

CLK\_TRIM: 0 to 63  $\Rightarrow$  1MHz to 13MHz (Default: 5MHz)

NOTE: The measure time depends on the clock frequency settings. One quarter frame takes about:

$$t_{FR4} = \frac{32 \cdot (2^{MBIT} + 4)}{F_{CLK}} \approx 27ms @ 5MHz$$

**Trim Register 5 (write only)**

|            |             |   |   |   |              |   |   |   |
|------------|-------------|---|---|---|--------------|---|---|---|
| Addr / CMD | 0x1A / 0x07 |   |   |   |              |   |   |   |
| Trim Reg 5 | 7           | 6 | 5 | 4 | 3            | 2 | 1 | 0 |
| Name       | RFU         |   |   |   | BPA TRIM TOP |   |   |   |
| Default    | 0           | 0 | 0 | 0 | 1            | 1 | 0 | 0 |

BPA\_TRIM\_TOP: 0 to 31  $\Rightarrow$  0.2 $\mu$ A to 4.0 $\mu$ A (Default: 1.5 $\mu$ A)

This setting is used to adjust the common mode voltage of the preamplifier.

**Trim Register 6 (write only)**

|            |             |   |   |   |              |   |   |   |
|------------|-------------|---|---|---|--------------|---|---|---|
| Addr / CMD | 0x1A / 0x08 |   |   |   |              |   |   |   |
| Trim Reg 6 | 7           | 6 | 5 | 4 | 3            | 2 | 1 | 0 |
| Name       | RFU         |   |   |   | BPA TRIM BOT |   |   |   |
| Default    | 0           | 0 | 0 | 0 | 1            | 1 | 0 | 0 |

BPA\_TRIM\_BOT: 0 to 31  $\Rightarrow$  0.2 $\mu$ A to 4.0 $\mu$ A (Default: 1.5 $\mu$ A)

This setting is used to adjust the common mode voltage of the preamplifier.

**Trim Register 7 (write only)**

|            |             |   |   |   |             |   |   |   |
|------------|-------------|---|---|---|-------------|---|---|---|
| Addr / CMD | 0x1A / 0x09 |   |   |   |             |   |   |   |
| Trim Reg 7 | 7           | 6 | 5 | 4 | 3           | 2 | 1 | 0 |
| Name       | PU SDA TRIM |   |   |   | PU SCL TRIM |   |   |   |
| Default    | 1           | 0 | 0 | 0 | 1           | 0 | 0 | 0 |

PU\_SDA\_TRIM: select internal pull up resistor on SDA (Default: 100kOhm)

PU\_SCL\_TRIM: select internal pull up resistor on SCL (Default: 100kOhm)

“1000” = 100 kOhm; “0100” = 50 kOhm; “0010” = 10 kOhm; “0001” = 1 kOhm

**Read Data 1 Command (Top Half of Array)**

|                       |                    |   |   |   |   |   |   |   |
|-----------------------|--------------------|---|---|---|---|---|---|---|
| Addr / CMD            | 0x1A / 0x0A        |   |   |   |   |   |   |   |
| Read Data             | 7                  | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| 1. Byte / 2. Byte     | PTAT MSB / LSB     |   |   |   |   |   |   |   |
| 3. Byte / 4. Byte     | Pixel 0 MSB / LSB  |   |   |   |   |   |   |   |
| 5. Byte / 6. Byte     | Pixel 1 MSB / LSB  |   |   |   |   |   |   |   |
| ...                   | ...                |   |   |   |   |   |   |   |
| 129. Byte / 130. Byte | Pixel 63 MSB / LSB |   |   |   |   |   |   |   |

The complete sensor data must be read at once. If the communication fails somewhere in between, all successive data will be corrupted. The readout can be stopped anywhere by pausing the clock. A new initialized readout proceeds at this stopped byte by continuing the clock, but the index is reset when a new conversion has been started.

If the bit for the electrical offsets (Bit 1 in Config 0x01) is set the electrical offsets are sampled and can be read similar to the active pixel:

**Read Data electrical offsets (Top Half of Array)**

|                       |                                  |   |   |   |   |   |   |   |
|-----------------------|----------------------------------|---|---|---|---|---|---|---|
| Addr / CMD            | 0x1A / 0x0A                      |   |   |   |   |   |   |   |
| Read Data             | 7                                | 6 | 5 | 4 | 3 | 2 | 1 | 0 |
| 1. Byte / 2. Byte     | PTAT MSB / LSB                   |   |   |   |   |   |   |   |
| 3. Byte / 4. Byte     | electrical offset (0) MSB / LSB  |   |   |   |   |   |   |   |
| 5. Byte / 6. Byte     | electrical offset (1) MSB / LSB  |   |   |   |   |   |   |   |
| ...                   | ...                              |   |   |   |   |   |   |   |
| 129. Byte / 130. Byte | electrical offset (63) MSB / LSB |   |   |   |   |   |   |   |

The complete sensor data must be read at once. If the communication fails somewhere in between, all successive data will be corrupted. The readout can be stopped anywhere by pausing the clock. A new initialized readout proceeds at this stopped byte by continuing the clock, but the index is reset when a new conversion has been started.

## 7.4 EEPROM Commands:

To read/write data from/to the internal EEPROM the I2C address 0x1B is used.

**EEPROM Commands**

| Name         | CMD  | Read / Write | Comment  |
|--------------|------|--------------|--|
| Standby      | 0x00 | W            |  |
| Active       | 0x01 | W            | releases all signals to default state<br>wait for 15 $\mu$ s when wake up from standby |
| Normal Erase | 0x02 | W            | program pulse width 5ms  |
| Normal Write | 0x03 | W            | program pulse width 5ms  |
| Block Erase  | 0x04 | W            | program pulse width 5ms  |
| Block Write  | 0x05 | W            | program pulse width 5ms  |
| Normal Read  | 0x06 | W            |  |
| Set Data     | 0x0A | W            | 16 bit data, MSB first   |
| Get Data     | 0x0B | R            | 16 bit data, MSB first   |

Note: The EEPROM must be activated (wake up from standby) prior being used. The active command also initializes the EEPROM to its default state.

Note: Each word must be erased before it can be written, a write command stores only a “1” to the EEPROM cell.

Note: The commands “SET\_DATA” / “GET\_DATA” will increment the address pointer, except for the first execution after “SET\_ADDR”.

All values are stored as unsigned 16 bit values in the little endian format unless they are specified otherwise. Grey marked areas are used during calibration or for future use and are Heimann Sensor reserved.

MBIT(calib), BIAS(calib), CLK(calib), BPA(calib) and PU(calib) are the settings for the registers that have been used during calibration (see chapter 7.3 on how to set them).

MBIT(user), BIAS(user), CLK(user), BPA(user) and PU(user) are free to be set by the user.

The temperature calculation is only valid if the same settings are used that have been set during calibration!

TN is the tablenumber and has to match the given tablenumber in the sample code.

### 8.1 Ambient Temperature:

The ambient temperature ( $T_a$ ) is calculated from the measured PTAT value, the  $PTAT_{gradient}$  and the  $PTAT_{offset}$ .

$$T_a = PTAT \cdot PTAT_{gradient} + PTAT_{offset} \quad (\text{Value is given back in dK})$$

where:

$PTAT_{gradient}$  is the gradient of the PTAT stored in the EEPROM as a float value

$PTAT_{offset}$  is the offset of the PTAT stored in the EEPROM as a float value

### 8.2 Thermal Offset:

The thermal offset of the sensor needs to be subtracted for each pixel to compensate for any thermal drifts.

$$V_{ij\_Comp} = V_{ij} - \frac{ThGrad_{ij} \cdot T_a}{2^{gradScale}} - ThOffset_{ij}$$

where:

$ij$  represents the row and column of the pixel

$V_{ij\_Comp}$  is the offset compensated voltage

$V_{ij}$  is the raw pixel data (digital), readout from the RAM

$ThGrad_{ij}$  is the thermal gradient, stored in the EEPROM from 0x40 to 0x7F

mail: [info@heimannsensor.com](mailto:info@heimannsensor.com)

$ThOffset_{ij}$  is the thermal offset, stored in the EEPROM from 0x80 to 0xBF  
 $gradScale$  is the scaling coefficient for the thermal gradient

### 8.3 Electrical Offset

The electrical offset is used to compensate changes in the supply voltage. This compensation is only a subtraction so it can be done before or after the thermal offset compensation (here done afterwards).

The compensation for is done by using the following formula:

$$V_{ij\_Comp}^* = V_{ij\_Comp} - elOffset_{ij}$$

where:

$ij$  represents the row (i) and column (j) of the pixel and electrical offset  
 $V_{ij\_Comp}^*$  is the electrical offset compensated voltage  
 $V_{ij\_Comp}$  is the thermal offset compensated voltage  
 $elOffset_{ij}$  is the electrical offset belonging to Pixel ij and read from the RAM

### 8.4 Object Temperature:

The calculation of the object temperature is done by using a look-up table and doing a bi-linear interpolation, the matching table is given by the tablenumber (TN). The table is supplied in a separate file named "Table.c".

The sensitivity coefficients ( $PixC_{ij}$ ) are calculated in the following way:

$$PixC_{ij} = \left( \frac{P_{ij} \cdot (PixC_{\max} - PixC_{\min})}{65535} + PixC_{\min} \right) \cdot \frac{epsilon}{100} \cdot \frac{GlobalGain}{10000}$$

where:

$PixC_{ij}$  is the sensitivity coefficient for each pixel  
 $P_{ij}$  is the stored sensitivity coefficient scaled to 16 bit  
 $PixC_{\min}$  is the minimum sensitivity coefficient, used for scaling  
 $PixC_{\max}$  is the maximum sensitivity coefficient, used for scaling  
 $epsilon$  is the emissivity factor

Leading to a compensation of the pixel voltage

$$V_{ij\_PixC} = \frac{V_{ij\_Comp}^* \cdot PCSCALEVAL}{PixC_{ij}}$$

where:

$V_{ij\_PixC}$  is the sensitivity compensated IR voltage  
 $PCSCALEVAL$  is a scaling coefficient, typically  $1 \cdot 10^8$

**8.5 Example calculation:**

Example values:

$$PTAT = 32357 \text{ Digits}$$

$$PTAT_{\text{gradient}} = 0.046 \text{ dK / Digit}$$

$$PTAT_{\text{offset}} = 1511.6 \text{ dK}$$

$$V_{00} = 34435 \text{ Digits}$$

$$\text{gradScale} = 15$$

$$ThGrad_{00} = 56693 \xrightarrow{\text{sign check}} -8842$$

$$ThOffset_{00} = 44$$

$$elOffset_{00} = 35000$$

$$PixC_{00} = 1.1 \cdot 10^8$$

$$PCSCALEVAL = 1 \cdot 10^8$$

Calculation of ambient temperature:

$$Ta = PTAT \cdot PTAT_{\text{gradient}} + PTAT_{\text{offset}} = 32357 \cdot 0.046 + 1511.6 \text{ dK} = 3000 \text{ dK}$$

Compensation of thermal offset:

$$V_{00\_Comp} = V_{00} - \frac{ThGrad_{00} \cdot Ta}{2^{\text{gradScale}}} - ThOffset_{00} = 34435 - \frac{-8842 \cdot 3000}{2^{15}} - 44 = 35200$$

Compensation of electrical offset:

$$V_{00\_Comp}^* = V_{00\_Comp} - elOffset_{00} = 35200 - 35000 = 200$$

Thermopile Array With Lens Optics

Rev.5: 2017.07.11 Schnorr

Example look-up table:

| TA[dK]/dig | 2882 | 3032 | 3182 | 3332 |
|------------|------|------|------|------|
| -64        | 1494 | 2128 | 2491 | 2775 |
| -32        | 2466 | 2692 | 2898 | 3091 |
| 0          | 2882 | 3032 | 3182 | 3332 |
| 32         | 3170 | 3285 | 3406 | 3530 |
| 64         | 3396 | 3491 | 3592 | 3699 |
| 96         | 3584 | 3665 | 3754 | 3848 |
| 128        | 3746 | 3818 | 3897 | 3981 |
| 160        | 3890 | 3954 | 4025 | 4102 |
| 192        | 4019 | 4078 | 4143 | 4214 |
| 224        | 4137 | 4191 | 4251 | 4317 |
| 256        | 4246 | 4296 | 4351 | 4413 |
| 288        | 4347 | 4393 | 4445 | 4503 |
| 320        | 4441 | 4485 | 4534 | 4588 |

$$V_{00\_PixC} = \frac{200 \cdot 1 \cdot 10^8}{1.1 \cdot 10^8} = 182$$

Ta was calculated before to 3000 dK.

The matching region in the look-up table is already marked yellow, the bi-linear interpolation is leading to an object temperature of 3941 dK = 120.9 °C.
